

## Functions in javascript(declaration & Expressions)

### Function Declaration:

→A function is declared using the function keyword. Function declaration is the traditional way to define a function in JavaScript.

### Syntax:

```
function functionName(parameters) {  
    // function body  
    return something;  
}
```

### Function Expression:

→A function is stored inside a variable.

### Syntax:

```
let variableName = function(parameters) {  
    // function body  
    return something;  
};
```
