

Practise Set(JS Ki Teen Teer! 🎯)

Q1. Store your age in a variable and add a button to your HTML page. When the user clicks it, an alert should show:

*"Your age is this—"
(Use Inline JavaScript.)*

Q2. Write a script that:

- Declares your **name** using *let*
- Declares your **age** using *const*
- Declares your **city** using *var*

*(Then show all values in the **browser console**.)*

Q3. Create a simple page that links an external JavaScript file.

In that file, write a function that:

- shows your name
- Shows an alert: *"External JS is working!"*

(Make sure the external file is correctly linked in <head> or <body>)
