Practise Set(JS Ki Teen Teer! 🎯)

Q1. Write a function named greetUser that takes a user's name as a parameter and prints "Hello, <name>!" in the console.

→Call the function two times with different names.

Q2 .Create a function expression stored in a variable named multiply that takes two numbers and returns their product.

→Test it with numbers 4 and 7.

Q3. Write a function declaration square that returns the square of a number.
Then, create a function expression cube that returns the cube of a number.

→Call both functions with the number 3 and log the results.
