

Practise Set(JS Ki Teen Teer!)

Q1. What does the finally block in Promises/async-await do?

- a) Runs only if the Promise resolves
- b) Runs only if the Promise rejects
- c) Runs always, whether resolve or reject
- d) Skips execution if catch is present

Q2. Write a function `delayedMessage(message, time)` that:

→returns a Promise

→after time milliseconds, resolves with the message.

Then use `.then()` to print "Hello after 2s" after 2 seconds.

Q3. Convert the function from Q2 into `async/await` style so it prints "Hello after 2s" after 2 seconds.
