

Practise Set(JS Ki Teen Teer!)

Q1 .Object Methods & this

Create an object car with properties, brand and year.

Add a method getInfo that returns a string like:

"This car is Toyota from 2020" (replace with actual values).

→Use this inside the method to access object properties.

→Call the method and print the result.

Q2. Nested Objects + Destructuring

You have an object:

```
let student = {  
  name: "Ali",  
  age: 22,  
  address: {  
    city: "Lahore",  
    zip: 54000  }  
};
```

→ Write code to **extract only city** from the nested object using destructuring, and print it.

Q3 Looping through Objects

What does the following code print?

```
let person = { name: "Mariyam", age: 20, city: "Karachi" };
```

```
for (let key in person) {  
  console.log(key);  
}
```

Options:

- A) Mariyam, 20, Karachi
- B) name, age, city
- C) person
- D) Error
