

Destructuring Arrays and Objects

1. Array Destructuring

→ Instead of accessing each element with indexes (`arr[0]`, `arr[1]`), we can unpack values into variables easily.

a. You can also skip values:

b. You can also set default values:

2. Object Destructuring

→ Instead of doing `person.name` and `person.age`, you can extract properties directly into variables.

a. You can rename variables:

b. You can also set default values:

3. Nested Destructuring

→ Works with objects inside objects or arrays inside arrays
