

Dates in JavaScript & Date Methods

1. Creating Dates

In JavaScript, you create dates using the Date object.

2. Creating Specific Dates

You can create dates by passing values into the Date constructor

Syntax: new Date(year, monthIndex, day, hours, minutes, seconds, milliseconds)

3. Useful Date Methods

a. Getting Values

getFullYear(), getMonth(), getDate(), getDay(), getHours(), getMinutes(), getSeconds(), getMilliseconds()

b. Setting Values

setFullYear(), setMonth(), setDate(), setHours()

4. Converting to Strings

toString()

toISOString()

toLocaleDateString()

toLocaleTimeString()
