

Nested Objects and Looping through Objects

1. Nested Objects

→A nested object just means:
An object inside another object.

2. Looping through Objects

Unlike arrays, objects don't have indexes (0,1,2...), they have keys.
So we loop differently.

a. for...in loop

Loops over keys in an object.

b.Object.keys

when you want an array of keys.

c.Object.values

when you only need values.

d.Object.entries

when you want both key and value directly.
