

JavaScript Interview Questions for Beginners to Advanced

Beginner-Level

1. What are the data types in JavaScript?

8 types: string, number, boolean, null, undefined, symbol, bigint, object.

2. Difference between var, let, and const?

var = function-scoped, hoisted.

let = block-scoped, not re-declared.

const = block-scoped, cannot be reassigned.

3. Difference between == and ===?

== → loose equality (checks values only).

=== → strict equality (checks value + type).

4. What is a function in JavaScript?

A reusable block of code to perform a task.

5. What are arrays and objects?

Array = ordered collection ([1,2,3]).

Object = key-value pairs ({name:"Ali"}).

6. Difference between null, undefined, and NaN?

null = intentional empty value.

undefined = variable declared but not assigned.

NaN = "Not a Number".

Intermediate-Level

7. What are arrow functions?

Shorter syntax for functions, don't have their own this.

```
const add = (a,b) => a+b;
```

8. What are template literals?

Strings with backticks (`) that allow variables.

```
let name = "Ali";  
console.log(`Hello ${name}`);
```

9. What is destructuring?

Extracting values from arrays/objects into variables.

```
let [a,b] = [1,2]; // a=1, b=2  
let {x,y} = {x:5, y:10};
```

10. Difference between map, filter, and reduce?

map → transform each element.

filter → select elements.

reduce → combine into one value.

11. Synchronous vs asynchronous JavaScript?

Sync = one task at a time.

Async = can handle multiple tasks without blocking (e.g., setTimeout, fetch).

12. What is JSON.stringify & JSON.parse?

JSON.stringify(obj) → convert object → string.

JSON.parse(str) → convert string → object.

13. Difference between localStorage and sessionStorage?

localStorage → data saved permanently until manually cleared.

sessionStorage → data cleared when tab/browser closed.
