

Practise Set(JS Ki Teen Teer!)

Q1. The innerHTML property of a DOM element is used to:

- a) Change the background color of an element
- b) Change the text content, and it can also interpret HTML tags inside it
- c) Add a new CSS class to an element
- d) Remove an element from the DOM

Q2. Write JavaScript code that selects this heading and changes its text to "Hello World!":

```
<h2 id="heading">Original Text</h2>
```

Q3. Write JavaScript code that adds a class "highlight" to the following <p> when a button is clicked:

```
<p id="para">This is a paragraph</p>  
<button id="btn">Click Me</button>
```
